

XV. CLASSIFIED RESEARCH

A. PREAMBLE

The primary mission of AURA is to establish, operate, and maintain outstanding modern astronomical research centers for use by all qualified astronomers. The freedom to publish the results of research performed at facilities managed by AURA is essential to the performance of this mission. Therefore, AURA has traditionally restricted its mission to unclassified research.

B. RESEARCH POLICY

It is AURA policy that the results of research performed at AURA managed facilities be published in the open scientific literature. Therefore, AURA will not accept contracts or grants for the performance of classified research. In the event that the research is being carried out under a grant or contract becomes classified by the government, that research is terminated, and all data and documents pertaining thereto will be provided to the funding agency.
